

## reCAPTCHA 2.0 for RiSE

Protect your website from robots and abusive scripts. reCAPTCHA 2.0 for RiSE is a simple addition that increases your site's security.

### What is reCAPTCHA 2.0?

- Most widely used CAPTCHA provider in the world
- Fights spam and abuse using advanced risk analysis techniques
- Distinguishes humans from spammers and bots

reCAPTCHA 2.0 increases the challenges posed based on the behavior of the user. The more frequent page loads or use leads to more complex tasks to prove the user is human. The escalating nature of the tasks maximizes the ease of use for most users while also maximizing the effectiveness of the software to block more sophisticated bots.

### What is reCAPTCHA 2.0 for RiSE?

- Custom iPart created by Joe John, CEO of John Consulting
- Can be placed on any RiSE web page
- Enhances security of sensitive information, like Member Directories
- Stops unauthenticated users from interacting with RiSE web pages

John Consulting has developed an application that uses reCAPTCHA technology specifically for RiSE. It can be placed on any RiSE page you create to ensure only humans can access content you do not wish to be crawled by spammers.

The product is designed to sit at the top of a webpage and block all standard content with a gray overlay. Your primary sitemap items should still be accessible. However, you can easily change the opacity of the overlay to suit your organization's needs.
